e!Sankey v2 – material and energy flow diagrams now with Excel interface

One of the most popular software tools for visualization of material and energy flows is now available in a new version with extended range of functions.

Hamburg – e!Sankey, a specialty graphics application was first released in 2007 and targets at the specific visualization needs of engineers and consultants. The tool is easy-to-use and doesn't require time-consuming training: Process symbols are dragged onto the editor area, and connected by arrows. Next, flows and their quantities are entered, bringing up coloured Sankey arrows in the diagram with a magnitude proportional to the flow quantity.

The software is being used in 42 countries by professionals from production, the energy or the environment sector. "Sankey diagrams" are a good means to display in a comprehensible way material, energy, or cost flows. They can be used to show energy efficiencies or hotspots for process optimization.

The new version comes with a completely new colour management and extended diagramming functionality. Diagrams can be adapted easily to corporate identity definitions. Another highlight in the e!Sankey 2 pro version is the 'Excel Live Link'. It allows to dynamically link to values in spreadsheet tables. If a value is modified, the Sankey diagrams are automatically updated and redrawn.

Visit our website for a graphic tour of the new e!Sankey tool:
