Control Technician / Engineer at Electrical Department
Doppelmayr Seilbahnen GmbH

Work focus:

- Control Design
- PLC Programming for Parking Stations

Title

Taking a life cycle perspective according to ISO 14001 - Strategic and operational challenges in practice

Abstract

During the presentation I will present the operative practical part of my master thesis. I have dealt with the life cycle of ISO 14001 and in particular with the strategic and operational challenges associated with it and the resulting approaches for a company.

I will briefly discuss the life cycle approach and its simplification. Then I will present the scope of the study. The collection, preparation, processing and presentation of the collected data will be shown using the example of a drag lift rope sheave.
